

Class 6: Homework Function

Challana Tea

The provided code that we want to improve and adapt to be more general for any protein-drug combination. Install package bio3D with `install.packages()` before running code.

```
library(bio3d)

id <- "4AKE"
pdb <- read.pdb(id)
```

Note: Accessing on-line PDB file

```
pdb.chainA <- trim.pdb(pdb, chain="A", elety="CA")

plotb3(pdb.chainA$atom$b, sse=pdb.chainA, typ="l", ylab="Bfactor")
```

```
#' Produce a B-factor plot of a PDB file
#'#
#'#@param id The pdb code of your input structure.
#'#
#'#@return a plot of B-factor favlues
#'#
#'#@examples
#'#  pdbplot("4AKE")

plotpdb <- function(id) {
  # Read the input PDB file
  pdb <- read.pdb(id)
  # Extract a subset of chain A
  pdb.chain <- trim.pdb(pdb, chain="A", elety="CA")
  plotb3(pdb.chain$atom$b, sse=pdb.chain, typ="l", ylab="Bfactor")
}

plotpdb('4AKE')
```

Note: Accessing on-line PDB file

Warning in get.pdb(file, path = tempdir(), verbose = FALSE): /var/folders/rr/

3rx969893_df30kbjzv323480000gn/T//Rtmpbd1dH8/4AKE.pdb exists. Skipping download

```
plotpdb('1AKE')
```

Note: Accessing on-line PDB file

PDB has ALT records, taking A only, rm.alt=TRUE

```
plotpdb('1E4Y')
```

Note: Accessing on-line PDB file
